Creative writing: design your own invention

[Read the assignment document](#). Then think of an invention or imaginary piece of technology that you wish could exist. It needs to be imaginary. Explain what it would look like, what it would be made of, how it would work, how people could use it, and why it would be so cool or useful. Be descriptive and creative. Consider doing a prewrite or outline to brainstorm ideas. You need eight sentences minimum but you can use as many paragraphs as makes sense to you. [Change your response to blue](#). [Follow the directions on the assignment document](#)

---

What does it look like?

- Necklace

How does it work?

- Connect with people's minds.
- Working like a computer but in your mind.
- Sowing information right in front of people's sight
- Control the display with your mind.

How will it be useful?

- People can leave home without carrying a phone.
- Students won't need textbooks any more in class.
- People can have entertainment on the device.
- Replacing phones.

Mobile phones make people's lives easier and more convenient. People enjoy their entertainment, do their assignments, or connect to others with a little device called a cell phone. Although cell phones are convenient, sometimes people feel annoyed carrying a phone when going outside. Why not make a mobile device that is even more convenient? I would like to invent a cellular necklace that you wear and use as a phone.

When you are wearing a cellular necklace, the chips created by aliens will connect with your mind, and all you have to do is to focus on the word "accept", then you can start using the necklace as a cellphone. The power of the necklace comes from people's movements, like a mechanical watch. If people keep moving around, it will never run out of battery.

With this new invention, people won't have to carry a phone with them anymore, and people can operate it easily with their thoughts, so they can do things more efficiently. For example, when you are following a video recipe and trying to make a delicious dish, the video always goes too fast and you can't keep up with the instructor. In this case, a necklace will help a lot because you can pause the video or go backward ten seconds with your mind. This will make things like cooking easier and more efficient.

Inventing a necklace like this can make people's lives more convenient, and people won't have to carry a heavy box with them when they depart from home. I hope someday this invention can really exist.
